ALL EMAILS (THOSE ABOVE, PLUS ADDITIONAL, IN BLOCKS OF 25):

SENDING EMAILS IN BULK:

1. Some emails in large blocks will inevitably bounce.

WHY? They are obtained from websites that haven't been updated.

They are disabled or blocked in response to ongoing activist campaigns.

2. To BLIND-COPY a block of emails, so recipients don't see huge email list:

- * COPY/PASTE a block of emails into the Bcc: line of your email.
- * TYPE YOUR OWN EMAIL in the To: line.
- * Personalize, sign, COPY/PASTE letter portion of alert into body of your email.
- * Click SEND.
- * REPEAT FOR EACH BLOCK OF EMAILS.
- * Email programs differ in terms of how many addresses you can send to at one time.
Yahoo, Outlook, Hotmail: Separate emails by a comma (,) and do not exceed 50.

SAMPLE LETTER NEXT PAGE

Dear Sir/Madam:

Please accept my comments, sent with concern for the welfare of animals used in the development of Teva Pharmaceutical products. I understand Teva contracts a research laboratory cited for falsification of data and cruelty to animals.

While I am confident no one at your firm condones animal abuse, I am surprised to learn Teva regularly employs Huntingdon Life Sciences (HLS) to conduct its animal experiments. From 1989 to 2006, HLS has acquired: Multiple breaches of the U.S. Animal Welfare Act, the arrest of workers on animal cruelty charges, more than 520 infringements of Good Laboratory Practice in England, and a \$50,000 payoff to the U.S. Agriculture Department for misstated records and animal welfare violations. HLS has a criminal record in the UK for failure to file company accounts on time.

Over the course of six investigations, HLS has been exposed for incompetence, fabricated records, and profound animal cruelty. As recently as late 2005, two former employees from the HLS Beagle Unit left their jobs distressed over the animal suffering they witnessed daily for 12 months.

According to tape-recorded testimonial from the two employees, animals are improperly overdosed with test drugs. Dogs are inadequately anesthetized before invasive procedures, such as painful extraction of bone marrow from the chest bone, among others.

One employee recounts daily blood-draw contests to see who could cram in the most before a break. Careless workers transferred blood into the wrong tubes. "One license holder I worked with would go in and out about five times with the same needle, not hitting the vein. Some dogs would struggle. I saw co-workers grab them by the scruff, shout and swear at them, swing them by the scruff and slap them."

I was shocked to view substantiated accounts of HLS technicians who nonchalantly kill dogs by flooding their lungs with toxic materials meant for the animals' stomach. In one investigative video clip, a technician repeatedly punches a screaming 4-month-old beagle pup in the face. During a supposedly post-mortem dissection, another tech slices into the chest of a convulsing monkey.

Undoubtedly, you find this callous treatment of animals as unacceptable as I do. I hope you will join the long list of customers, suppliers and financiers who no longer risk credibility by association with Huntingdon Life Sciences.

I also urge Teva to reevaluate its testing protocol and condense animal experiments whenever possible. Cost-effective and expedient non-animal systems are rapidly replacing old-fashioned animal studies. Options range from cell and tissue cultures and "structure-activity relationship" models to genetic/protein analysis and numerous other non-animal research tools.

Please make the ethically responsible decision to sever ties with HLS and modernize your product testing with methods that are not only more relevant to human health, but also humane.

Thank you,
